PROFESSIONAL SUMMARY

Full Stack Developer and Computer Science undergraduate with hands-on experience developing web applications using Python, Flask, JavaScript, and MySQL. Proficient in building RESTful APIs, responsive interfaces, and relational database schemas using MVC and OOP principles. Experienced in integrating ML models and Generative AI into practical web tools. Strong problem-solving foundation in core computer science with a focus on writing clean, maintainable, and scalable code.

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, C, JavaScript (ES6+), SQL

Frontend Development: HTML5, CSS3, JavaScript, Responsive Web Design, Asynchronous JS (Fetch/AJAX)

Backend & APIs: Flask, RESTful APIs, CRUD Operations, MVC Architecture, JSON Serialization, Streamlit

Databases: MySQL, SQL, Relational DBMS, Schema Design, Query Optimization

Core CS: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), DBMS Concepts

AI & Data: Scikit-learn, Pandas, NumPy, NLP, Generative AI (Google Gemini API)

Developer Tools: Git, GitHub, VS Code, Jupyter Notebook, Figma

TECHNICAL PROJECTS

AI Interview Assistant — Full-Stack AI Web Application

Python, Streamlit, Google Gemini API, REST API, NLP, PDF Parsing

- Built an AI-powered interview preparation web platform that parses resumes from PDFs, dynamically generates relevant interview questions, and evaluates candidate answers using NLP.
- Implemented an end-to-end processing pipeline (PDF text extraction, prompt formatting, and automated response scoring) with session state management and exception handling.
- Integrated Google Gemini REST API with structured prompt constraints to generate consistent AI feedback across a multi-page responsive web interface.

Loan Prediction System — Full-Stack ML-Integrated Web Application

Python, Flask, MySQL, JavaScript, HTML5, CSS3, Scikit-learn, REST APIs

- Developed a full-stack loan eligibility application powered by a Flask REST API backend integrated with a trained Scikit-learn classification model.
- Built structured RESTful endpoints with input validation, JSON payload handling, and formatted error responses for real-time eligibility predictions.
- Designed a responsive frontend using HTML5, CSS3, and JavaScript, utilizing asynchronous HTTP requests (Fetch/AJAX) to deliver instant results without page reloads.

Expense Tracker — Personal Finance Web Application

Python, Flask, MySQL, JavaScript, HTML5, CSS3, REST APIs

- Built a full-stack personal finance web application implementing complete CRUD functionality to track transactions, recurring expenses, and budget categories.
- Designed normalized MySQL relational database schemas with foreign key constraints, writing optimized SQL queries for reliable data storage and retrieval.
- Structured a modular Flask backend following MVC design principles paired with an interactive frontend dashboard displaying category-wise spending and budget metrics.

MoodSense — Sentiment Analysis Web Application

Python, Streamlit, Scikit-learn, NLP, Pandas, Matplotlib

- Developed a real-time sentiment analysis web tool that processes user text inputs through an NLP pipeline (tokenization, cleaning, and TF-IDF vectorization) for text classification.
- Integrated trained Scikit-learn machine learning classifiers into an interactive web interface, providing real-time sentiment predictions and confidence scores.
- Built visual dashboard charts using Pandas and Matplotlib to display sentiment trends and classification summaries within an intuitive user interface.

EDUCATION

Aditya University, Andhra Pradesh, India

Expected Graduation: 2027

Bachelor of Technology in Computer Science & Engineering (Specialization: Data Science)

CERTIFICATIONS

• **Java Certification** — Oracle

• **SQL** — HackerRank

• **Python** — Red Hat

• **C Programming** — CLA (Cisco)

• **DBMS** — Infosys

• **Python Programming** — Cisco

• **IT Specialist: HTML & CSS** — Certiport

• **EDA in Python** — Udemy
